

Assembly Instructions

Remove screws from the upholstered seat using a #3 Phillips screwdriver. Rotate the swivel plate to the open position (as seen in diagram). Align swivel holes with the upholstered seat holes. Place one screw in each hole and tighten securely using a #3 Phillips screwdriver.

This stool is intended for individual seating only. Periodic examination should be made of all screws, fasteners, glides, structural joints and any other points of stress. All screws and fasteners should be routinely tightened as required. Any damaged hardware should be immediately replaced with an identical component. If product becomes unstable or any defects are found, remove from service immediately.

Assembly Instructions

Align front of bucket seat and
"FRONT-TOP" of swivel
together for proper positioning

Remove screws from the upholstered seat using a #3 Phillips screwdriver. Rotate the swivel plate to the open position (as seen in diagram). Position the front of the bucket and the swivel plate so the words "FRONT-TOP" face the front of the bucket (see diagram of swivel plate). Align swivel holes with the upholstered seat holes. Place one screw in each hole and tighten securely using a #3 Phillips screwdriver.

This stool is intended for individual seating only. Periodic examination should be made of all screws, fasteners, glides, structural joints and any other points of stress. All screws and fasteners should be routinely tightened as required. Any damaged hardware should be immediately replaced with an identical component.
